FUTURE CHALLENGES ANSWERED

CONTENT MONITORING AND CONTROLLING

The rapid changes in security on the Internet make it necessary to adapt by using effective and targeted strategies to face new challenges. Therefore, we propose a new approach that can support monitoring and control systems. We design a system to monitor and control a content in circulation to achieve each key performance indicator.

IMPLEMENTING PROVEN GLOBAL BEST PRACTICE

By providing a dedicated lane as a monitored gate, we are able to help provide better analytics and at the same time enhance monitoring and control. Our proposed tactical solution has been implemented in other countries in the Asia-Pacific region such as Thailand, Vietnam and Myanmar.
